Research and Teaching Experience

Postdoctoral Fellow | Oct 2024–Present *Johns Hopkins University*, Baltimore, MD

- Postdoctoral advisor: Somnath Ghosh
- Integrate scientific machine learning (neural operators) with multiscale multiphysics models for nondestructive evaluation (NDE).

Research Aide Technical | May 2023–Aug 2023 *Argonne National Lab*, Lemont, IL

- MOOSE finite element software development for high-performance computing (HPC).

Teaching Assistant | Aug 2020–May 2021 *Duke Kunshan University*, Kunshan, China

- Graded assignments and led recitation sessions for Linear Algebra and Stochastic Processes.

Education

Doctor of Philosophy (PhD) | Sep 2020–Sep 2024 *Duke University*, Durham, NC

- Mechanical Engineering, Computational Mechanics track; Advisor: John Dolbow
- Extended phase-field fracture theory explicitly incorporating material strength surfaces to dynamic loading, with large-scale simulations of crack nucleation and propagation.
- Developed models and numerical simulations for coupled acoustics, elastodynamics, and damage, and for pulsed laser ablation.
- Dissertation: *A computational framework for simulating crack nucleation and growth in materials subjected to dynamic loads*

Master of Science (MS) | Sep 2017–Mar 2020 *Shanghai Jiao Tong University*, Shanghai, China

- Advisor: Yongxing Shen

Bachelor of Engineering (BE) | Sep 2013–Jul 2017 *Jilin University*, Changchun, China

Presentations

2026 | USACM Student Chapter Seminar Series | Online | Seminar presentation Damage sensing digital twin for piezocomposites integrating neural operator with parametrically upscaled constitutive damage model

2026 | 20th U.S. National Congress on Theoretical and Applied Mechanics (USNCTAM26) | Pasadena, California | Oral presentation Virtual damage sensing digital twin for piezocomposites integrating neural operator with parametrically upscaled constitutive damage model

2026 | Enabling Multifunctionality through AI Informed Material Discovery and System Design (GRC 2026) | Ventura, California | Poster presentation Virtual damage sensing digital twin for piezocomposites integrating neural operator with parametrically upscaled constitutive damage model

2026 | HEMI Day 2026 | Baltimore, Maryland | Podium presentation Virtual damage sensing digital twin for piezocomposites integrating neural operator with parametrically upscaled constitutive damage model

2024 | The 16th World Congress on Computational Mechanics (WCCM16) | Vancouver, Canada A phase-field approach for the nucleation and propagation of dynamic cracks

2023 | The 17th United States National Congress on Computational Mechanics (USNCCM17) | Albuquerque, New Mexico A model-based simulation framework for coupled acoustics, elastodynamics, and damage with application to nano-pulse lithotripsy

2022 | The 15th World Congress on Computational Mechanics (WCCM15) | Yokohama, Japan Model-based simulations of pulsed laser ablation using a CutFEM method

2019 | The 15th United States National Congress on Computational Mechanics (USNCCM15) | Austin, Texas A homogenization-based phase field approach to fracture

2019 | The 2nd International Conference of Mechanics of Advanced Materials and Structures | Nanjing, China A micromechanics-based phase field approach to fracture

2019 | The International Conference on Data Driven Computing and Machine Learning in Engineering | Shanghai, China A manifold learning approach for multiscale phase field evolution for fracture
